

Multitrack Video & Audio Layering Guide

Step-by-Step Operating Manual & Time Envelope Workflow

Core Architecture: LoopLayer Aesthetic operates on a **Phase-Locked Master Loop Cycle**. Layer 1 establishes the fixed master duration (D) and tempo. All subsequent layers (Layer 2..N) record freely overdubbed takes, allowing you to slide a constant length-(D) Time Envelope to extract your best phrase while discarding extra tail audio/video. The entire stack loops continuously in sync.

Phase 1: Setting the Master Loop (Layer 1)

- 1. Tap Record:** Begins capturing your initial video & audio take from the camera view.
- 2. Tap Stop:** Stops recording. The raw clip immediately starts looping in preview.
- 3. Adjust Trim Handles:** Set the initial loop start and end boundaries to define Master Duration (D).
- 4. Confirm Master Loop:** Tapping confirm locks in D and starts clock playback. Layer 1 loops infinitely on the video stack.

Phase 2: Overdubbing & Time Envelope (Layer 2..N)

- 1. Tap Record WHILE Stack Plays:** You do *not* need to pause playback. Pressing Record arms the system.
- 2. Quantized Start:** The Record button glows yellow in **ARMED** state. It waits for the loop restart boundary (0ms) and automatically starts recording at the exact instant the loop repeats.
- 3. Perform Overdub:** Record your new vocal or instrument layer while hearing and seeing all prior layers loop in perfect sync.
- 4. Tap Stop:** Recording finishes.
- 5. Move the Time Envelope:** A fixed window of length D is placed over your raw recording. Drag the envelope left or right to choose the exact portion of your recording to keep.
- 6. Confirm Phrase:** The portion inside the envelope joins the active stack; all extra footage outside the envelope is removed.

Quick Workflow Summary & Control Matrix

Action / Phase	System Behavior	Musician Outcome
Press Record (Layer 1)	Starts capturing video & audio immediately.	Performs initial baseline phrase.
Press Stop (Layer 1)	Opens Trim Editor with initial handles.	Selects initial loop length D .
Press Record (Layer N)	Arms and waits for loop 0ms boundary tick.	Seamless quantized start without stopping playback.
Press Stop (Layer N)	Opens Timeline Browser with fixed D envelope.	Slides envelope to select best take section.
Confirm Envelope	Trims unselected footage; adds layer to stack.	Layer joins live mix; Record offered again.
